

Automation Capabilities

NOVEMBER 2025

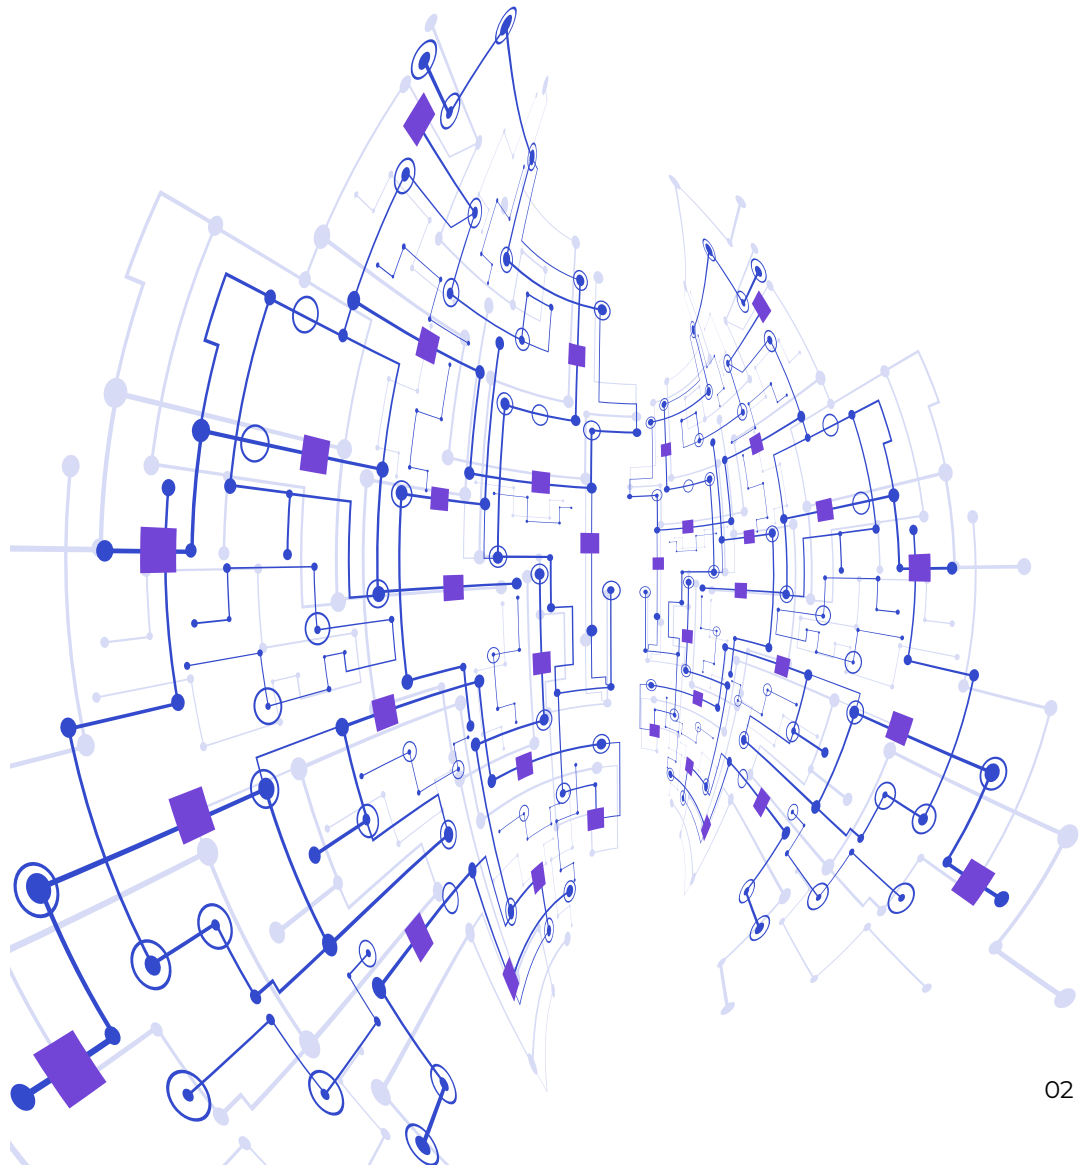

Introduction

Welcome to the

World of Operational Intelligence

Transform your operations with ADIS — Cogneesol's proprietary BPM 4.0 framework designed to move beyond traditional process management. ADIS empowers organizations with adaptive, intelligent, and scalable solutions that elevate performance, enhance decision-making, and create future-ready operational excellence.

Built for modern enterprises, ADIS integrates automation, analytics, and dynamic workflows to deliver continuous optimization across every touchpoint. It enables businesses to anticipate challenges, respond faster, and operate with greater precision — all while reducing inefficiencies and unlocking new levels of agility. With ADIS, your operations don't just function; they evolve, innovate, and lead.

OFAC Report Generation and Surefyre Integration

Background

OFAC reports ensure compliance by checking insured entities against U.S. sanction lists.

The manual process involved searching, capturing screenshots, converting to PDF, and uploading to Surefyre.

The goal was to eliminate manual effort and improve turnaround time.

Context/Ask

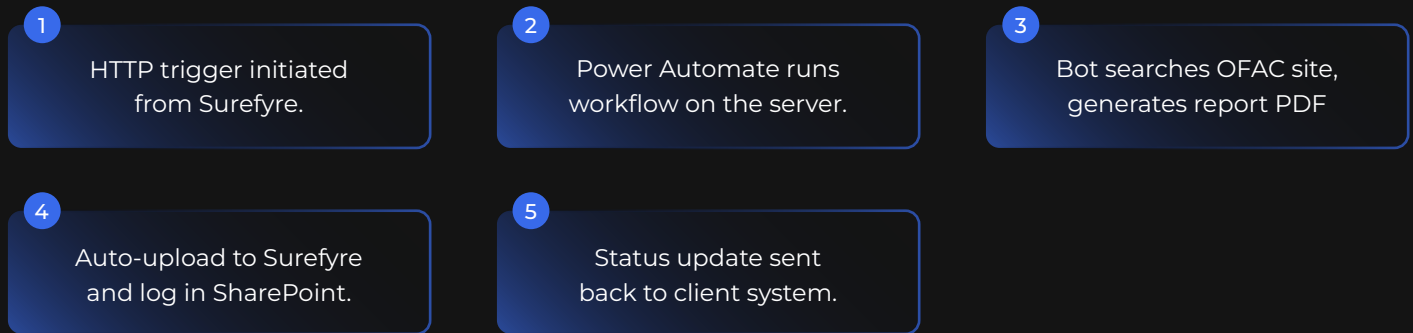

- Automate end-to-end OFAC report generation and upload into Surefyre.
- Enable real-time status updates and maintain audit traceability.
- Improve speed, accuracy, and compliance in underwriting operations.

Scope

- Automate OFAC report generation, upload, and logging.
- Integrate with Surefyre for trigger and output handling.

Approach devised and deployed: Single Layer Automation Framework

Single-step workflow automation was designed using Power Automate to handle the entire process
