

Automation Capabilities

NOVEMBER 2025

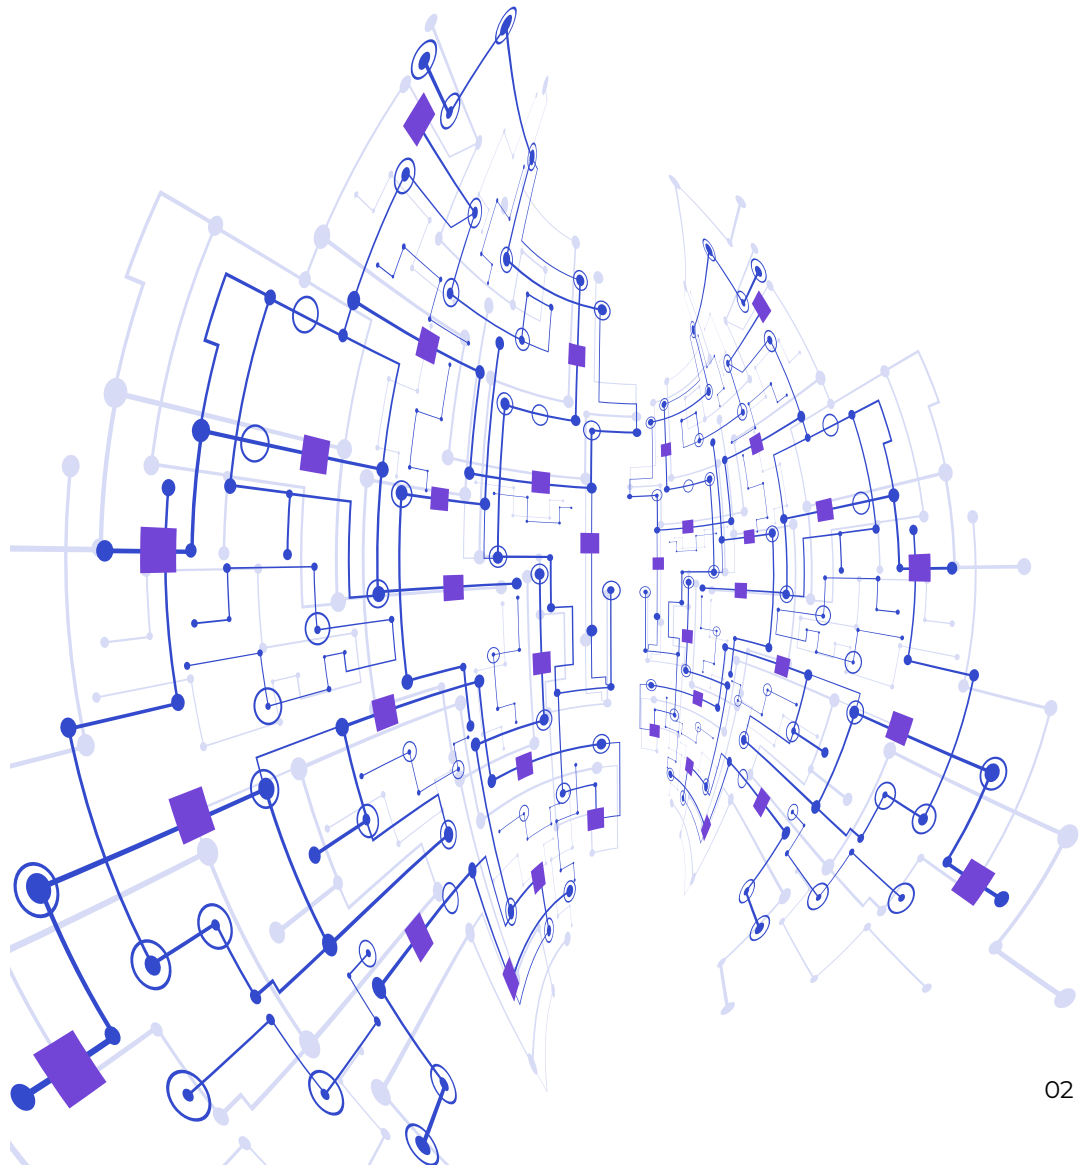

Introduction

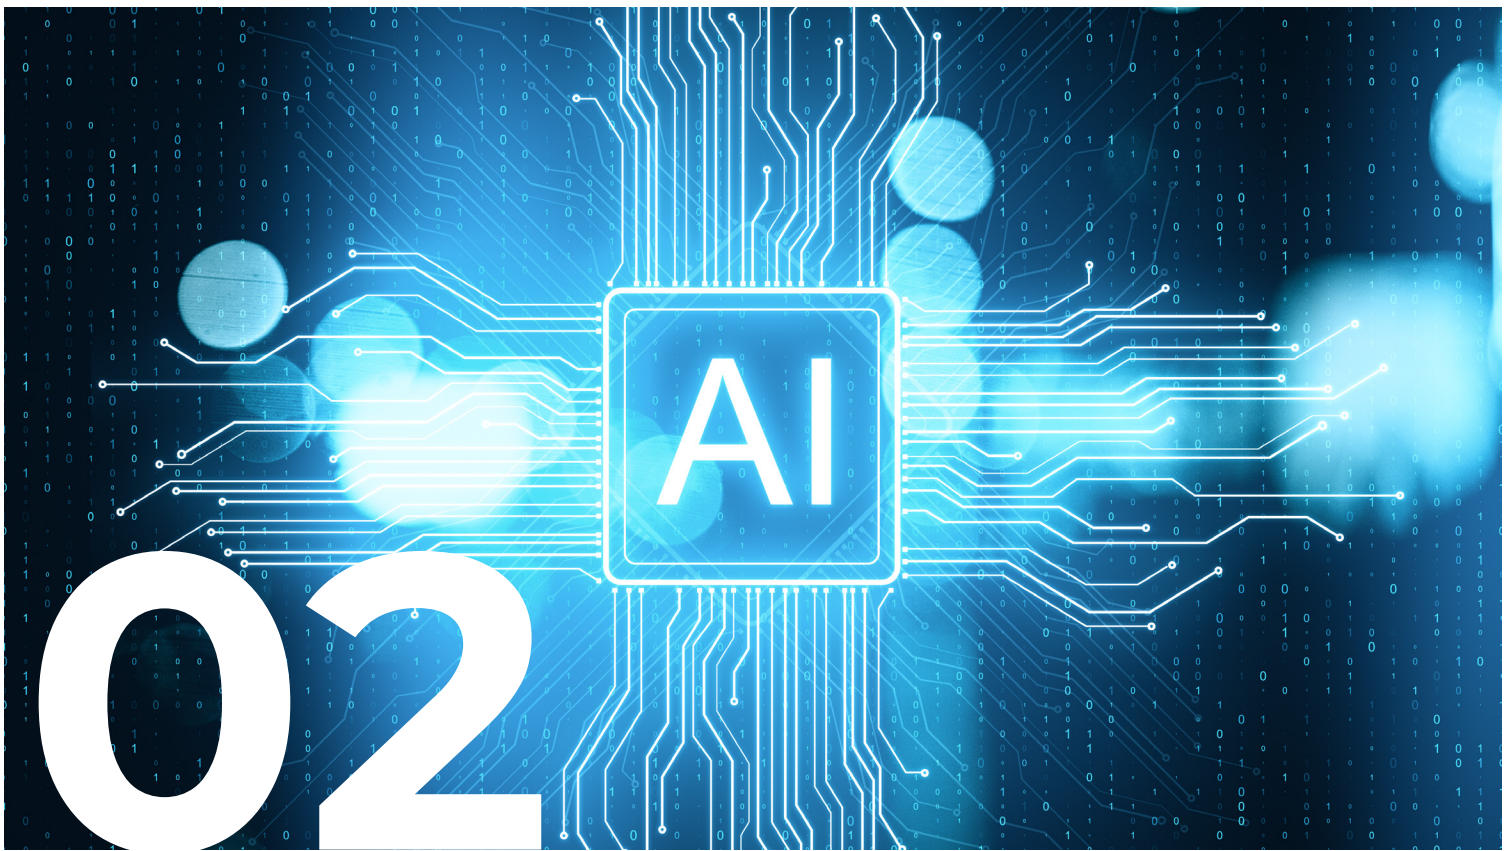

Welcome to the

World of Operational Intelligence

Transform your operations with ADIS — Cogneesol's proprietary BPM 4.0 framework designed to move beyond traditional process management. ADIS empowers organizations with adaptive, intelligent, and scalable solutions that elevate performance, enhance decision-making, and create future-ready operational excellence.

Built for modern enterprises, ADIS integrates automation, analytics, and dynamic workflows to deliver continuous optimization across every touchpoint. It enables businesses to anticipate challenges, respond faster, and operate with greater precision — all while reducing inefficiencies and unlocking new levels of agility. With ADIS, your operations don't just function; they evolve, innovate, and lead.

Quote Rater Automated Solution

Background

The Quote Rater process helps generate insurance quotes by enabling agents to input client data and compare results across multiple insurers.

However, manual data entry and validation were time-consuming and error-prone, affecting quote accuracy and turnaround time.

Context/Ask

The goal was to automate the insurance quote rating process to:

- Eliminate manual data entry and file preparation.
- Improve data accuracy and reduce processing time.
- Enable seamless integration with rating templates and occupancy databases.

Ask Scope

To build a one-step automated quote rating system that extracts, validates, and populates client quote data—reducing manual effort and ensuring accurate, faster insurance quote generation.

Approach devised and deployed: Single Layer Automation Framework
